

# TOOLS MANAGEMENT

## TRACK. CHECK. MANAGE.

## TOOLS MANAGEMENT

The intuitive software solution for the construction industry for digital management, clear identification and allocation of tools, machines and equipment.

# TOOLS MANAGEMENT

Digital tool management for the administration and allocation of all tools, machines and equipment.

Where is the drill? Who used it last? Do we have all the tools for the assembly? Will the cordless screwdriver be available next week?

These questions are sure to be asked more often in your company!

## Your challenge

- Required work equipment cannot always be found immediately or is not in proper condition.
- Valuable working time is spent searching for tools.
- Tool shrinkage results in further costs, as new tools are procured that should actually be available.

# TRACK. CHECK. MANAGE.

## OUR SOFTWARE-AS-A-SERVICE SOLUTION

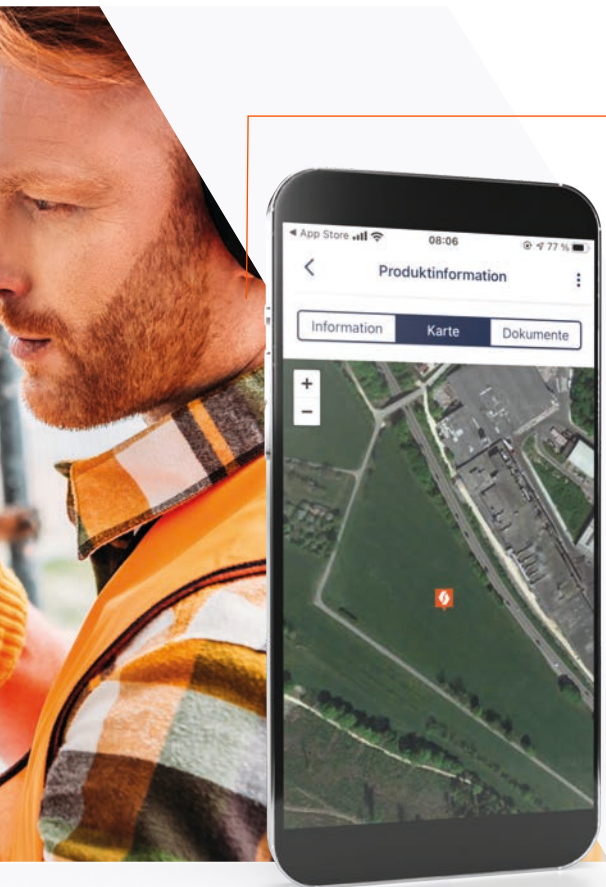

With the intuitive software solution Tools Management, you are able to identify and locate your tools and query their condition. With the help of the mobile app and NFC technology, every loan and return transaction is recorded and clearly assigned to a location or employee.

**Simple service message:** Simple service message: You can send a message to a specific person e.g. in case of a defect in the tool or if you need an item to check if it is in stock.

# HARDWARE SOLUTION

The right hardware for each use

NFC reader

NFC technology

## IMPORTANT FUNCTIONS AT A GLANCE

**Location determination**

Passive tracking of your work materials.

**Inventory**

Keep track of all your work materials.

**Useful life**

Find out how long certain working materials were used in one place.

**Service/maintenance management**

Simply send service notifications via your device, schedule your maintenance and keep track of everything.

**Cost centre assignment**

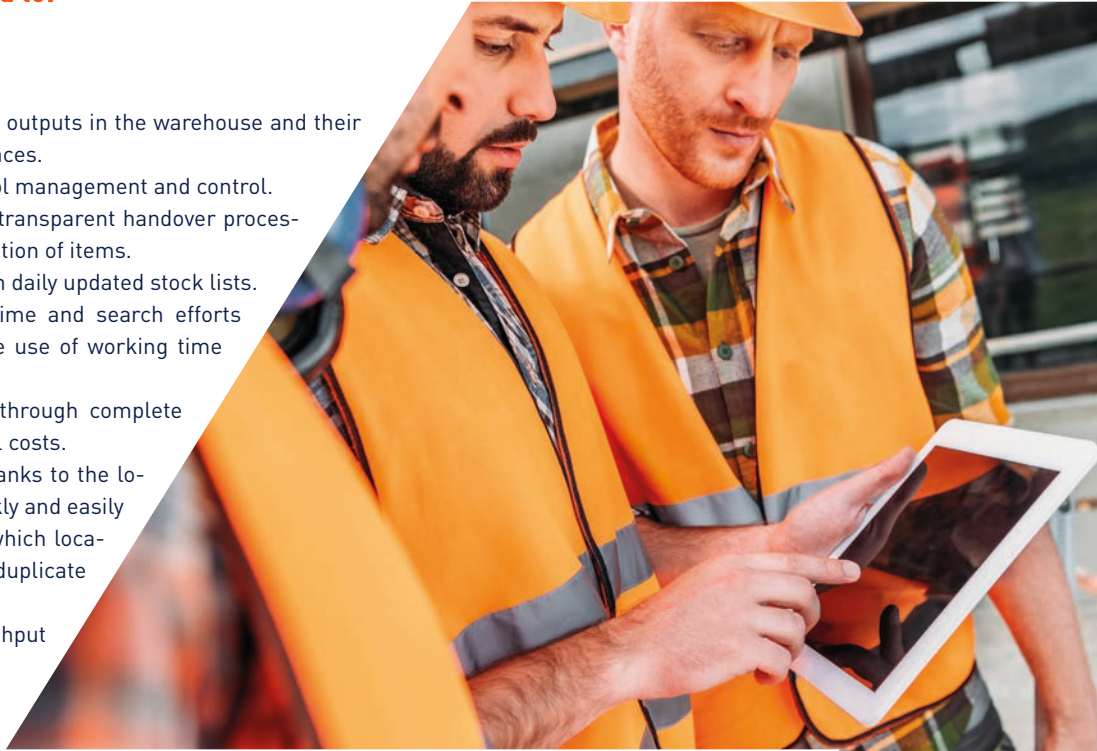

Get transparent cost breakdowns.

# YOUR ADVANTAGES

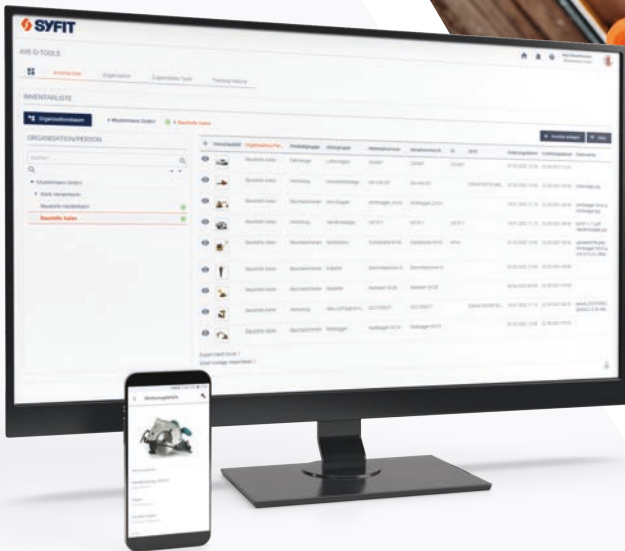

Using our solution allows you to:

- Simplification of tool inputs and outputs in the warehouse and their transfer between people and places.
- Mobile location-independent tool management and control.
- Time and cost savings through transparent handover processes and through the clear allocation of items.
- Increase tool availability through daily updated stock lists.
- Reduction of unplanned downtime and search efforts and thus increase of productive use of working time and relief of employees.
- Optimisation of tool inventory through complete traceability and reduction of tool costs.
- Optimise material planning: Thanks to the location of the tools, you can quickly and easily plan which tools should go to which location. This way you minimise duplicate purchases of tools.
- Automatic recording of throughput times.

**1** Create employee/organisation and register by chip.

**2** Inventory of the tools.

**3** With an RFID reader or smartphone, the tools are transferred mobile and clearly assigned to a person/organisation.
