PARKING MANAGEMENT
TRACK. CHECK. MANAGE.

SYFIT

PARKING MANAGEMENT

The intuitive software solution for indoor and outdoor tracking with active tracking of objects, vehicles and devices on larger areas.
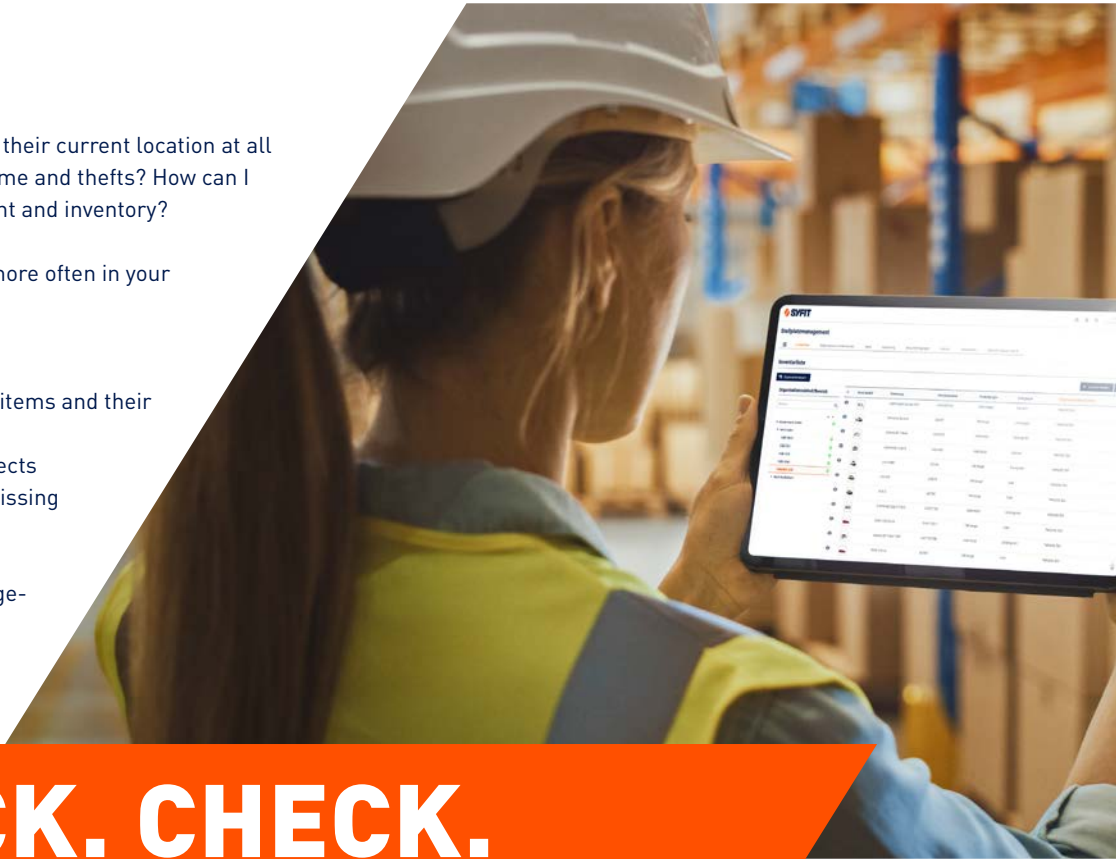

PARKING MANAGEMENT
The software for indoor and outdoor tracking and active tracing

How can I keep track of items and their current location at all times? How can I reduce search time and thefts? How can I simplify and speed up management and inventory?

These questions are to be asked more often in your company!

Your challenge

- Maintaining an overview of all items and their current location at all times
- Achieve clear allocation of objects
- Time-consuming search for missing work equipment
- Reduce search time
- Simplify and accelerate management and inventory

TRACK. CHECK. MANAGE.

OUR SOFTWARE-AS-A-SERVICE SOLUTION

The software-as-a-service solution Parking Management is a scalable tracking solution for the digital and active tracking of objects on larger sites. Our solution supports the identification, management, organisation and inventory of all objects in indoor and outdoor areas.

IMPORTANT FUNCTIONS AT A GLANCE

Location & map function

Get an optimal overview of organisations and objects through active and passive tracking.

Inventory

Keep track of your items incl. associated information and documents.

Integration in backend / ERP systems

Flexible integration into backend and ERP systems connected to the internet via web services.

Intuitive dashboard

Get all the information you need reliably and clearly on a customisable dashboard.

Battery management

Get information about charge level and battery change notices.

SYFIT

YOUR ADVANTAGES
Using our solution allows you to:

- Saves time by quickly locating objects on larger sites
- Cost saving by reducing the risk of theft (receive notification of unauthorised movements of your objects).
- Access to all information regardless of location
- Simplification of the daily work routine of the employees
- Increasing efficiency by optimising the use and availability of objects

Also available as retrofit solution!

TIME-SAVING PARKING SPACE MANAGEMENT

A TRACKING SOLUTION MAKES MOTORHOMES TRACEABLE

In 1931, Arist designed Germany's first „caravan" in a garage. Today, the globally active company produces its caravans and motorhomes on modern production lines at its headquarters in Isny in the Allgäu. The factory premises have been gradually expanded and now cover an area of 280,000 square metres - roughly the size of forty football pitches. In addition to the production halls, there are also parking spaces for up to 4,000 chassis or assembled vehicles. These are moved around the company premises up to 15 times during the production process.

Experienced staff knew the approximate location of individual caravans and mobile homes, thanks to numerous paper lists, knew in which of the several hundred metre long rows they had to search. Once found, the staff recorded the vehicles with a hand scanner and transferred the data to the computer via USB connection. A time-consuming undertaking. Besides the time it took, the search was one thing above all: expensive. Up to ten drivers were on the road to bring the mobile homes to the production lines. In extreme cases, this could mean a production delay or even a standstill.

With our app-based parking space management solution, the GPS positions of the hand scanner are determined as soon as employees scan the barcodes on the vehicle when parking. The data is transmitted to the backend via mobile devices and can be accessed in the browser at any time.

Long searches in the large open space are a thing of the past, as are delays in production. Drivers can locate the vehicles quickly and safely. In addition, an auditor-compliant inventory can be carried out at the touch of a button. This saves work and reduces costs.
